Software Engineering Seminar (SS 2014)

Optimizing Software Architectures to Improve Non-Functional Properties

Description

The student shall investigate the recent state of the art in architecture optimization wrt. non-functional properties. He/She shall investigate what has happened after the survey by Aleti et al. present the results of one or two streams research in the recent years 2012-2014 in the seminar. For the evaluation it is required to understand the background literature used to build up the method and derive/analyze strength and weaknesses. Furthermore the student shall investigate how the techniques can be applied in realistic software development projects.
